

Phoenix Med Spa Launch — Gameplan

Strategic frame. White-label of an AI-driven dental ops platform into the Phoenix metro med spa market. Land-and-expand starting with premium SMB single-location and 2-3 location operators. Architecture, channel relationships, and pricing posture built enterprise-ready from day one to support a planned move up-market into PE roll-up / multi-location platforms in months 12-18.

Target buyer. MD-owned or 2-3 location med spas in PHX/Scottsdale running multi-service stacks (injectables + at least one of: GLP-1 cash-pay, TRT, peptides). Excludes solo nurse-owners (won't pay premium pricing) and chain locations (corporate-locked tech stacks).

Target market size. ~360 winnable indie/SMB med spas in PHX metro, ~160 in the premium tier, ~60-80 in the hybrid wellness bullseye. 18-month goal: 20-30 paying customers, \$25-40k MRR.

Decisions to Lock This Week

Decision	Choice
Brand name	New standalone brand (not Dentiflow). Buy .com immediately.
ICP within SMB	MD-owned 1-location + multi-location 2-3 spas only. No solo RN-owners.
Pricing tiers	4-tier, none published publicly. Boutique \$999, Premium \$1,499, Multi-location \$2,500-3,500/loc, Enterprise custom.
Service scope at launch	Injectables-only MVP. Hybrid wellness modules in v2 after first 10 customers.
Setup fee	\$0 for first 5 pilot customers (in exchange for case study + reference rights). \$5,000 thereafter.

Phase 0 — Validation & Legal Foundation

Weeks 0-2. Zero code written.

Goal: validate pricing and pitch with 5 owner conversations, engage attorney, open enterprise channel relationships in parallel.

Action	Deliverable
Find 1 Allergan/AbbVie Aesthetics rep covering Scottsdale via LinkedIn. Buy coffee. Ask for intros to 5 spa owners.	5 warm-intro names
Cold message 10 MD-owned PHX med spas: "Building an AI receptionist + reactivation engine for premium med spas — would you give me 30 min for a \$200 gift card?"	5 interviews booked
In interviews: validate the three hooks (lead leakage / reactivation / kill two line items), test \$1,499/mo price, test \$5,000 setup tolerance.	Notes from 5 calls
Engage AZ healthcare attorney (\$2-3k retainer). Scope: BAA chain feasibility, HIPAA posture for AI-generated SMS, AZ Medical Board exposure.	Signed engagement letter
Email Skytale Group + DC Advisory managing directors. Subject: "Building AI ops layer for med spa roll-ups — want your read on EV-multiplier thesis."	2 emails sent, intro calls scheduled
Buy brand domain + register LLC + provision Twilio HIPAA-tier subaccount under new brand.	Domain, LLC, Twilio HIPAA subaccount live

Gate to Phase 1. At least 3 of 5 owners say "yes I'd pay \$1,499/mo for this if it worked." If under 3, fix the pitch or price before building.

Phase 1 — Product MVP

Weeks 2-6. Claude Code velocity.

Goal: ship a multi-tenant, enterprise-architected med spa SaaS forked from Dentiflow.

Schema refactor (Week 2)

- Add `organizations` table parent to `practices` (PE-ready from day one)
- Refactor `patients.location` (text column) into relational `locations` table FK
- Add `audit_log` table for any PHI read/write
- Add `staff` table with role-based permissions (RBAC scaffolding for future SSO)
- Drop CHECK constraints on `recall_sequences.sequence_day` and `assigned_voice`
- Drop UNIQUE constraint on `(practice_id, patient_id)` in `recall_sequences`

Templates + intent classifiers (Week 2-3)

- Rewrite recall templates — 15-20 injectables-cadence templates (Botox 10-week + filler 5-month variants, one concierge voice, two variants each)
- Rebuild recall intent classifier — add `side_effect`, `reschedule`, `product_question`, `payment_plan`. Remove dental keywords.

- Rebuild STL intent classifier — replace dental emergency patterns with side-effect patterns (bruising, swelling, redness, lump, vision change)
- Patch response validator regex — remove "imaging/scan/records" blocklist (med spas use these legitimately)

Voice agent retuning (Week 3-4)

- Rewrite STL persona — concierge-luxury tone, no insurance-pivot copy
- Hard-code AI self-disclosure ("Hi, I'm the AI assistant for [practice]") as opening line, uneditable
- Add two-party recording disclosure default

PMS integration (Week 4-5)

- Build Boulevard adapter (largest PHX market share, public API). Apply to Boulevard partner program immediately — 30-90 day approval window, start now.
- Generic webhook adapter for everything else (Aesthetic Record, Pabau, Mangomint, Vagaro)

Compliance infrastructure (Week 5-6)

- Signed Twilio HIPAA-tier BAA
- Signed Anthropic Enterprise BAA (post-Dec 2025 covered surface)
- Per-customer BAA template, attorney-reviewed
- Brand-name blocklist: "Ozempic / Wegovy / Zepbound" blocked by default (FDA marketing-letter protection)

Medical director clinical sign-off (parallel, Weeks 4-6)

- Find one PHX-area MD or NP to clinically review templates + side-effect intent classification. Pay \$500-1,500.
- Required before any patient SMS goes live.

Phase 1 cost: ~\$5-8k (attorney \$3k + clinical review \$1k + Twilio HIPAA setup \$500 + brand and domain \$500 + tooling/infra \$2k).

Phase 2 — First 5 Pilot Customers

Weeks 6-14.

Goal: 5 free-setup pilots running live. Reference customers and case study material.

Week	Action	Target
6-7	Convert 3 of 5 warm-intro spas from Phase 0 into pilot contracts	3 signed
8-10	Onboard pilots white-glove. You personally configure templates, integrate Boulevard, set up call forwarding to AI agent.	3 live
10-12	Land 2 more pilots from Allergan rep follow-up intros	5 total live
12-14	Capture metrics: missed-call recovery rate, reactivation conversion, no-show recovery, review velocity. Write case study #1 from best performer.	1 case study published

Pilot offer structure. \$0 setup, \$999/mo for 6 months, then \$1,499/mo standard. Case study and reference rights required. Cancel anytime in first 30 days.

Phase 2 cost. ~\$2-3k/mo Twilio + Anthropic + infrastructure. Offset by \$4,995 MRR by Week 14 (5 × \$999).

Phase 3 — Repeatable Sales Motion

Months 4-8.

Goal: 20 paying customers, \$20-30k MRR, repeatable sales playbook.

Lever	Mechanism
Allergan/Galderma rep referrals	Maintain 1-2 rep relationships in PHX. Quarterly check-ins. Reps' best toxin accounts are your best buyers.
Compounding pharmacy rep channel	Empower, Olympia, Belmar, Tailor Made, Strive — these reps call on hybrid wellness clinics. Build 1-2 relationships.
Case study + cold outbound	Use best-performing pilot as headline. Cold email + IG DM to 200 PHX med spa owners with the metric ("Spa X recovered \$47k in 90 days from reactivated patients").
AmSpa Medical Spa Show 2027 (April)	Attend as participant, not exhibitor. 1:1 coffees with 20 spa owners + 5 PE operating partners. Soft launch of EV-multiplier pitch.
Podcast guest spots	Medical Spa Insider, Med Spa CEO. 3 appearances by Month 6.
Local events	AmSpa AZ chapter meetups, Skytale-hosted events, Allergan rep dinners.

Gate to Phase 4. 20 customers retained for 3+ months at under 5% churn. If churn higher, fix product or ICP before scaling.

Phase 4 — Channel + Mid-Market

Months 8-18.

Goal: 50-100 customers, first multi-location deal, first PE platform conversation.

Track	Action
SMB sales	Hire 1 SDR or part-time appointment setter. Standardize onboarding to ≤4 hours per customer.
Multi-location	Pitch your 2-3 best pilot customers on opening location #2 with you pre-installed. First multi-loc reference.
PE channel	Skytale + DC Advisory partnership conversations mature. Become recommended stack for post-acquisition standardization.
Product	Add hybrid wellness modules (GLP-1 refill cadence, TRT cycle tracking, peptide refill). Build SSO/SAML. Multi-org dashboards.

Explicitly NOT Doing in 2026

- Solo RN-owned single-location spas (won't pay premium price)
 - Pure GLP-1 telehealth clinics (regulatory risk + 503B exclusion proposal pending)
 - Chain locations — LaserAway, Ideal Image, Milan (corporate-locked stacks)
 - 5+ PMS adapters at launch (Boulevard + generic webhook only until customer demand forces it)
 - Public pricing page (consultation-only)
 - AmSpa exhibitor booth (too expensive before 5+ references)
 - Hiring before \$30k MRR (founder-led sales until repeatable)
 - Multi-voice templates (concierge-only in v1)
 - Multiple service categories at launch (injectables-only MVP)
-

90-Day Success Metric

By end of Month 3:

- 5 paying pilot customers
- \$5k MRR
- 1 published case study
- 1 Skytale or DC Advisory intro call completed
- AZ attorney + medical director on retainer

If hit: model is validated. If missed: the issue is almost certainly ICP (wrong buyer) or pitch (wrong message), not product.

Next Action — Send 3 Emails Today

1. LinkedIn message to an Allergan Aesthetics rep in Scottsdale
2. AZ healthcare attorney inquiry (recommend Goldberg Law or Lengea — both have med spa practice)
3. Skytale Group managing director with the EV-multiplier thesis pitch

Everything else cascades from those three conversations.
